Office Action Summary

Art Unit: 3624

1. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 1, the reclining mechanism has not been sufficiently defined. The relative positions of the centers of rotation should be set forth in structural terms rather than relative to the occupant.

In claim 2, the recitation that the second ends of the links are connected to each other appears misdescriptive, as the figures show an intervening link between the ends. Moreover, the location of the second ends should be set forth relative to the other elements, along with the interconnection thereof to the backrest.

In reciting that the first link is "employed as the center of rotation of said seat back", the claim is misdescriptive, as the first link is part of the reclining mechanism which has a rotation "spaced apart from" that of the seat back.

In claim 3, the phrase "angle of friction" is confusing and unclear.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3624

3. Claims 1 and 2, so far as definite, are rejected under 35 U.S.C. 102(b) as being anticipated by Ritter.

Figure 1 shows structure as claimed, including a pivotally mounted seat back, a reclining mechanism pivoted at 6a, and wherein arm 3,4 may be construed as a first link and member 5,6 as a second link.

4. Claims 3 and 4 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

May, Martens, Naef, Strien et al, McFalls et al, and Griswold et al show various features of the invention.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Peter Brown whose telephone number is (703) 308-2103.
